

Victoria Gate, Leeds

Leeds City Centre is now home to John Lewis's Victoria Gate where you would think part of it was made from real gold, as WPL's rooftop regency gold anodised eyelet mesh finish looks fit for royalty. The support comes from WPL's architectural supporting sections bolted down onto a concrete roof and towers over the rooftop by an incredible 4 metres.

The structure is manufactured from structural extruded aluminium, an unbelievable range for a new era in decorative structures from WPL. Look out for the manufacturing tolerances and check out the horizontal lines which don't falter from position over 4 metres of screening.
